

PRESSURE REDUCING VALVE

FLANGED TYPE

MODEL: SK720X

The Pressure Reducing Valve is designed to maintain stable downstream pressure in water and mechanical piping systems. Featuring pilot-controlled technology and a durable ductile iron body, it ensures accurate pressure regulation, reliable performance, and easy maintenance.

1. SPECIFICATIONS

Product	Pressure Reducing Valve
Connection	Flanged Type
Body Material	Ductile Iron ASTM A536
Flange Standard	ANSI 150
Max. Working Pressure	300 psi
Model	SK720X
Color	Blue
Application	Water Distribution & Mechanical Piping Systems

2. FEATURES & BENEFITS

- Accurate downstream pressure regulation
- Durable ductile iron ASTM A536 body
- Flanged ANSI 150 connection
- Reliable pilot-controlled operation
- Easy inspection and maintenance
- Suitable for water distribution systems

4. APPLICATIONS

- Water distribution lines
- Commercial buildings
- Industrial facilities
- Mechanical piping systems

3. PRODUCT OVERVIEW

5. STANDARDS / COMPLIANCE

- ANSI 150 Flange Standard
- Reliable Performance
- Water System Compatible
- Quality Manufacturing
- Easy Maintenance & Service
